

TABLE OF CONTENTS.

TITLES OF THE MEMOIRS AND REVIEWS CONTAINED IN THE FIRST VOLUME OF THE THIRD HEXADE.

No. I.

- I. **T**HE history and dissection of a female child, aged two years and nine months, in whose body, after death, was found a fœtus of a monstrous appearance: by Edward B. Gaither, Physician, of Springfield in Kentucky: to which are prefixed explanatory observations, by the Editors; and are subjoined the facts concerning a fœtus produced within the body of a boy, p. 1
- II. A Dissertation on the noxious exhalations of marshes. Translated from the Latin of the famous Lancisi, physician to Pope Clement XI. by Saml. L. Mitchell, Senator of the United States, &c. 9
- III. Observations on the ulcerated tonsils of children. By Dr. Felix Pascalis, physician of the city and county prisons, and consulting physician of the alms-house in New-York. 19
- IV. Analysis of the *magnolia tripetala* of Virginia and the Carolinas. By David B. Warden, Esq. Consul-General of the U. S. at Paris, &c. 25
- V. An account of the Yellow Fever as it appeared at Stabroeck, in the colony of Demarary, in 1803 & 4, (Continued from Vol. VI. of the 2d Hexade.) 29
- VI. Description of a disease among the neat cattle of Suffolk County, N. Y. caused apparently by eating the juicy and sub-acid sprouts of oak shrubs in the woods. By Gen. John Smith, of Mastic, a Senator in Congress, &c. 38
- VII. On the efficacy of alkalies to preserve cleanliness and health on ship-board; and on the uselessness of

- acid fumigations for those purposes. By Jonathan Cowdery, Esq. Surgeon in the navy, &c.* 39
- VIII.** *Remarks on the spotted and malignant fever, as it appeared in Connecticut, during the years 1808-9. By Dr. Samuel Woodward, physician at Torrington.* 42
- IX.** *Conjectures on the remains of military and other works, found in the Western parts of the U. States. By Judge Moses Younglove, of Columbia County.* 47
- With Reviews, of the British act of Parliament making further provision for the effectual performance of quarantine, p. 49; of Seaman's dissertation on the mineral waters of Saratoga and Ballston, p. 57; of J. Rush's inquiry into the use of the omentum, p. 66; and of the Philadelphia medical dictionary, p. 72;—to which are subjoined twenty-six articles of intelligence, on surgical, botanical, mineralogical, chemical, medical, and economical subjects, foreign and domestic, extending from p. 73 to p. 104.*

No. II.

- I.** *The history of a malignant disease, attended with some peculiar symptoms, which prevailed in Sussex County, (Del.) in the winter and spring of 1775. By the late Rev. Matthew Wilson, of Lewes.* p. 105
- II.** *A case of carbuncle successfully treated. By David Hosack, M. D. Professor of materia medica and botany in Columbia College.* 112
- III.** *Consumption of the lungs, illustrated by dissection and by practice. By Elias Black, late house physician to the New-York hospital, and now resident at Rio Janeiro, in Brazil,* 116
- IV.** *Lancisi's dissertation on the noxious exhalations of marshes, (continued.)* 126
- V.** *Origin of yellow fever in the contaminated air of a coasting vessel, and of the town of St. Mary's in Georgia; with an enumeration of its symptoms and mortality, and the beneficial effects of volatile alkali as a remedy. By James Seagrove, Esq. of St. Mary's.* 135
- VI.** *Some further remarks on the use of mercurial remedies in fevers. By Levi Wheaton, physician in Providence. (R. I.)* 139
- VII.** *Observations on the influenza of 1807, as it appeared in Maryland. By George Williamson, physician at Baltimore.* 145

- VIII. *Frost's account of the yellow fever in Demarary,*
 (continued.) 150
With Reviews, of a report read before the Georgia Medical Society on draining the lands in the neighborhood of Savannah, p. 153; of the Ohio and Mississippi Navigator, p. 158; of Spafford's general geography and rudiments of useful knowledge, p. 165; of Warren's cases of organic diseases of the heart, p. 166; and of the American dispensatory, p. 177—to which are annexed twenty-five pieces of information, literary, economical, physical, and practical; among which are a Latin epistle of Linnæus, a view of the medical schools in the several states, the history of the yellow fever of 1809, a summary of the doctrine of submarine explosions, and the facts relative to masses of earth falling from the atmosphere coated with hail and ice, from p. 181 to 208; and an appendix, containing a discussion of certain points of criticism relative to the Saratoga and Ballston waters, between the author of the Essay and certain reviewers, p. 210—216.

No. III.

- I. *Anatomical and pathological observations on the teething of infants, and on the analogy between infantile dentition and some other diseases. By Horace H. Hayden, of Baltimore, Surgeon-Dentist.* p. 217
 II. *Williamson's observations on the influenza of 1807, as it appeared in Maryland, (concluded.)* 225
 III. *Lancisi's dissertation on the noxious exhalations of marshes, (continued.)* 237
 IV. *A succinct account of the cynanche trachealis, or croup, as it appeared in 1796, 1799, 1803 and 1808. By Job Wilson, physician in Hanover, (N. H.)* 249
 V. *Frost's account of the yellow fever in Demarary, (continued.)* 252
 VII. *A sketch of the course of natural history delivered in the college at New-York. By Samuel L. Mitchell, University Professor, &c.* 257
To which are added Reviews, of Dr. Livingston's Essay on Merino Sheep, p. 268; and of Dr. Ramsay's history of South-Carolina, p. 278; together with intelligence relative to a remarkable laceration and fracture, to the revival of the doctrine of phlogiston, to a description of Elgin garden, (with a print,) to Schmaltz's improvements in American botany, and an appendix, containing the highly valuable report of the health-officer of New-York, concern-

ing the endemic or yellow fever which prevailed at Brooklyn, on the western end of Long-Island, opposite the city of New-York, during the summer and autumn of 1809.

No. IV.

- I. *Case of a wound in the posterior tibial artery; with remarks on the natural and artificial methods of stopping hæmorrhages. By Thomas Hubbard, M. D. of Pomfret, in Connecticut.* p. 313
 - II. *The efficacy of alkalies in destroying the poison of lues, exemplified in the opinions and practice of Joel Abbot, physician in Wilkes County, Georgia.* 316
 - III. *Facts illustrating a disease incidental to the female children of negro slaves; and observations, showing how certain occurrences therein enumerated influence the colour and complexion of human beings. By John Archer, M. D. of Harford County, (Md.)* 319
 - IV. *Advantages of alkaline injections in venereal disorders of the urethra. By Dr. George Williamson, physician in Baltimore.* 323
 - V. *Lancisi's dissertation on the noxious exhalations of marshes, (continued.)* 326
 - VI. *A case of subclavian aneurism which occurred in Guy's hospital, London. By Valentine Mott M. D. Corresponding member of the Medical Society, &c.* 331
 - VII. *Abstracts of the bills of mortality kept in N. York, during 1807 and 1808. By Samuel L. Mitchill.* 335
 - VIII. *Frost's account of the yellow fever in Demarary, (continued.)* 344
 - IX. *Case of aneurism cured by spontaneous concretion of the sides of the artery. By Lyman Spalding, M. D. of Portsmouth, (N. H.)* 348
 - X. *Hayden's anatomical and pathological observations on the teething of infants, &c. (concluded,)* 353
- With Reviews of the transactions of the Philosophical Society in Philadelphia, vol. vi. part 2. p. 363; of the Connecticut Academy of Arts and Sciences, p. 369; of Shattuck's three Boylstonian dissertations, p. 384; and of Rush's edition of Sydenham's writings, p. 387; to which are annexed several articles of intelligence, on the spotted fever raging in Massachusetts, on intended new publications, on the original saltness of the lakes of North-America, on an instance of fœtus in each ovarium, on light emitted by the flash of a gun, on colic and convulsions in early infancy, lectures on chemistry and surgery, &c. &c. p. 391 to 416.*
